However, most torrents are in Chinese; the bittorrent client I downloaded the torrents with was only able to pick up Chinese.. 720p.BluRay.x264-SiNNERS. I tried a few Chinese video sites that look like they are for VOD but they are all in Chinese and can't be downloaded. If it can be done, how, and how do I then open it? A: If your torrent tracker has no Chinese language interface, then you cannot download torrents, only seeds. Since it is not possible to seed a torrent by P2P, you are forced to download the whole torrent manually. All the torrent files you have been provided are in Chinese, except the video files. In this case, you will need to download the torrent files individually. As for how to play the torrent files you have been provided, it depends on what torrent tracker you used and the client you downloaded. I will assume you used torrentz.eu and the DL manager you downloaded is torrentz-dl-manager. As for what client, try downloading Vuze, Transmission, or qBittorrent. This invention relates to apparatus for interfacing a computer to one or more radio communications networks and, more particularly, to apparatus capable of operating in both a "soft" digital mode and a "hard" digital mode. Communication networks have been available for some time now which allow computers to communicate with each other and with other devices over a radio frequency link. Generally, a radio communications network comprises at least one radio communications station, which usually comprises at least one radio communications terminal which is capable of transmitting and receiving radio frequency signals, and a radio communications link which allows the terminal to communicate with other radio communications stations. In one common application, the radio communications network is part of a cellular telephone network which allows a plurality of land-based cellular telephone subscribers to communicate with each other and to communicate with land-based or marine land-based telephone subscribers. Radio communications networks allow for the efficient utilization of the available radio frequency spectrum. Unlike telephone networks, for example, radio communications networks do not require the use of a wire line between 1678ea9f9e
